Junior Software Developer

1 **About the Company** [www.alientt.com]
2 Founded in 2013, Alien Technology Transfer is a young, dynamic, rapidly growing company, operating as
3 an independent public funding advisory. We specialize in project financing, project management,
4 development of concepts and business models for innovative products.
5 • We have offices in 5 different countries across Europe: London, Dublin, Rome, Las Palmas, Vilnius.
6 • Our team is composed of international professionals with experience in engineering, business
7 analysis, project management and project financing through European grants.
8 • We help start-ups to be successful.
9
10
11 **About the position**
12 We are looking for a graduate or soon-to-be-graduate in Computer Science to learn how to and be
13 responsible for implementing both the backend and frontend of a new web application.
14 You'll be working in a small agile cross-functional team and participate in all aspects of the project
15 lifecycle including requirements gathering, functional specification, design, development, QA, and
16 maintenance.
17
18 We expect you to be passionate about building software and perform well working in a team, along with
19 developers and web designers.
20
21
22 **The location**
23 This role is based in Las Palmas de Gran Canaria, in Spain. This is a great place to live, thanks to
24 its laidback lifestyle, affordable prices, and unique natural beauty. Las Palmas is the ninth largest
25 city in Spain, fast becoming a hub for digital nomads, and has "the best climate in the world"
26 according to a Syracuse University study.
27
28 As a second option, you can choose one of our offices in Rome.
29
30
31 **About you**
32 • Computer Science Degree or equivalent experience
33 • Fluent in English
34 • Excellent coding skills
35 • You're a problem solver with innovative ideas, a curiosity to learn and a desire to understand
36 systems beyond those you're responsible for
37
38
39 **Ideally or interested in learning the following**
40 • Knowledge of Python and Django
41 • Front-end development experience with JavaScript, HTML5 and CSS3
42 • Understanding of asynchronous request handling, partial page updates, and AJAX
43 • Understanding of javascript frameworks/libraries like jQuery, Angular.js or React.js
44 • Knowledge PostgreSQL or other RDBMS
45 • Knowledge of web application security and best practices
46 • Understanding of code versioning tools, such as Git
47 • Knowledge of CI tools and build systems like gulp or grunt
48
49
50 **Why should you apply?**
51 • Competitive salary plus performance bonus in a relatively low cost of living area in Spain.
52 • Opportunity to build and shape a new product.
53 • High growth potential.
54 • Great office, friendly and informal start-up work environment.
55 • Fantastic location.
56
